PROFILE

Senior Product Designer with 10+ years of experience designing B2B SaaS, fintech and enterprise products. I make complex workflows clear and easy to use, combining product thinking, UX and visual design. My work covers customer-facing journeys, operational tools, integrations and scalable design systems. I lead design from discovery to delivery, working closely with product managers and engineers.

EXPERTISE

Product design	End-to-end product design, UX/UI, interaction design, information architecture, product discovery
Visual & systems	Visual design, design systems, design tokens, component libraries, accessibility (WCAG)
Research & delivery	User research, prototyping, usability testing, design documentation, cross-functional collaboration
Domains	B2B SaaS, fintech, enterprise workflows, back-office tools, integrations, developer experience

EXPERIENCE

2025 - Present
Tallinn / Remote

Senior Product Designer · Independent

Contract work for product companies, through my own company

Well / Bestway Group · NHS dispensing · ~700 pharmacies, 360+ care homes

- Owned the design of Care Homes, a platform for how care home residents get prescribed and receive medication. Also contributed to Direct to Patient.
- Designed care-home onboarding and the group/unit hierarchy, working with developers to define the underlying data and how the flows connect.
- Redesigned how teams manage 28-day medication cycles, with kanban and filtered list views, clearer cycle setup and easier navigation.
- Rebuilt the design system: set component rules, added primitive and semantic token layers, and merged scattered components into one shared library. Made every token and component pass WCAG AAA contrast. Aligned the work with the existing shadcn and Tailwind setup.

Dealfront · B2B sales intelligence SaaS

- Designed an AI assistant that combines Dealfront company data with a user's business context, like what they sell, company size and ideal customer profile, to explain why a prospect may be relevant. After launch, users started saving their own prompts, a clear sign of real use.
- Designed Dynamic Lists, replacing duplicated prospect lists with non-destructive Views so each list stays a single source of truth. Prototyped three structures in v0 and tested them with 10 users (5 internal, 5 customers) before engineering started.
- Designed enterprise user management and permissions for Dealfront's move upmarket, including support for Microsoft Entra SSO.
- Worked with three product managers and frontend engineers from early ideas to launch, and led the research behind key design decisions.

2023 - 2024
Tallinn, Estonia

Senior Product Designer · Inbank

Consumer finance · Four markets

- Led the redesign and launch of the Hire Purchase flow for every product in all four markets, around 18 products in total. Each product asks for different things and has its own legal checks, so every flow had to be adapted, not copied. Kept maintaining and improving them after launch.
- After the redesign, customer support tickets dropped by about 20%, task completion went up and people finished the flow faster.
- As Inbank's first in-house designer, built the design system from scratch, used by 4 product areas: Hire Purchase, partner channels, internet banking and back-office. A shared core of components, plus libraries for each country and product, so teams could reuse common patterns and still adapt forms, content and legal checks per product.
- Rolled out the new Inbank brand across the live product and made the updated screens ready for development.
- Rebuilt the customer service back-office, moving it from spreadsheets and legacy tools to one system for tracking cases, ownership and outcomes.

2020 - 2022
Tallinn, Estonia

Senior Product Designer · Pipedrive

CRM used by 100,000+ companies in 170+ countries

- Owned design for Integrations and Developer Experience, from the app marketplace (400+ apps) to the tools third-party developers use to build integrations.
- Set visual and interaction patterns for third-party apps inside Pipedrive. Action discovery went from about 30% to 50% within a month, and usage passed 68% for integrations using the patterns.
- Ran user research for the area and used it in roadmap planning and cross-team alignment during a period of fast company growth.
- Later mentored a junior designer who joined the team.

2016 - 2020
Tallinn, Estonia

Product Designer · Bigbank

Retail banking · Five markets

- Redesigned the end-to-end loan application across five countries, covering both the customer journey and the internal back-office workflows.
- Visited all five markets to interview country managers, PMs and the customer service and sales staff who handle loan applications every day. Ran stakeholder workshops to set priorities for one global system used by every branch.
- Redesigned the Financial Back-office and built the bank's first design system, including a coded component library.

SKILLS

Design systems	Figma variables, primitive and semantic tokens, multi-brand theming, dark mode
Frontend	HTML, CSS, JavaScript, React, Vue
Tools	Figma, Webflow, Framer, Amplitude, Jira, Confluence, Notion, ClickUp, VS Code
AI workflow	Claude, Cursor, Windsurf, v0, Figma Make

EDUCATION

Master's Degree in Design · Faculdade Pitágoras, Brazil · 2011

LANGUAGES

Portuguese (native) · English (fluent)
